

Assignment-6

Name: Boyapati Durgamallikarjuna

RPS UserId: 21951

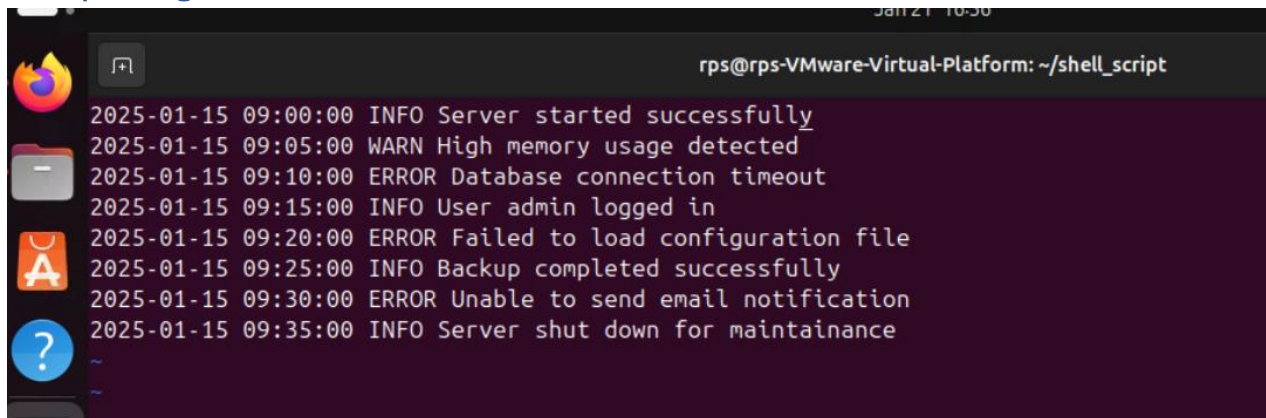

Assignment 6: Given a sample log file, write a script using grep to extract all lines containing "ERROR". Use awk to print the date, time, and error message of each extracted line.

Shell script code with the name of `extract_errors.sh`:

A terminal window titled 'rps@rps-VMware-Virtual-Platform: ~/shell_script' showing the code for the script. The code prompts for a filename, checks if the file exists, and then uses grep and awk to extract and format error messages from a log file.

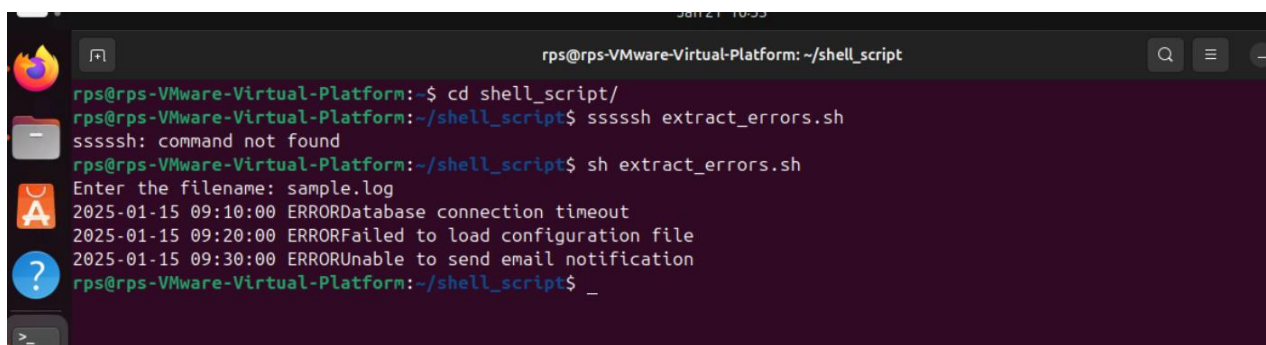

```
Jan 15 23:51
rps@rps-VMware-Virtual-Platform: ~/shell_script
read -p "Enter the filename: " file
if [ ! -f "$file" ]; then
    echo "Log file '$file' not found!"
    exit 1
fi
grep "ERROR" "$file" | awk '{print $1,$2,$3,$4, substr($0, index($0,$5))}'
```

Sample log file

A terminal window titled 'rps@rps-VMware-Virtual-Platform: ~/shell_script' displaying the contents of a sample log file. The log contains several entries with timestamps, log levels (INFO, WARN, ERROR), and messages.

```
Jan 15 10:30
rps@rps-VMware-Virtual-Platform: ~/shell_script
2025-01-15 09:00:00 INFO Server started successfully
2025-01-15 09:05:00 WARN High memory usage detected
2025-01-15 09:10:00 ERROR Database connection timeout
2025-01-15 09:15:00 INFO User admin logged in
2025-01-15 09:20:00 ERROR Failed to load configuration file
2025-01-15 09:25:00 INFO Backup completed successfully
2025-01-15 09:30:00 ERROR Unable to send email notification
2025-01-15 09:35:00 INFO Server shut down for maintainance
```

Commands to run `extract_errors.sh` and checking its function:

A terminal window titled 'rps@rps-VMware-Virtual-Platform: ~/shell_script' showing the execution of the script. The user navigates to the script directory, attempts to run it with 'sssssh' (which fails), and then successfully runs it with 'sh'. The script prompts for a filename and outputs the error lines from the sample log file.

```
Jan 15 10:33
rps@rps-VMware-Virtual-Platform: ~/shell_script
rps@rps-VMware-Virtual-Platform:~$ cd shell_script/
rps@rps-VMware-Virtual-Platform:~/shell_script$ sssssh extract_errors.sh
sssssh: command not found
rps@rps-VMware-Virtual-Platform:~/shell_script$ sh extract_errors.sh
Enter the filename: sample.log
2025-01-15 09:10:00 ERRORDatabase connection timeout
2025-01-15 09:20:00 ERRORFailed to load configuration file
2025-01-15 09:30:00 ERRORUnable to send email notification
rps@rps-VMware-Virtual-Platform:~/shell_script$ _
```
